

Lucy Wilson has been with JM since 2009. With a background in Chemical Engineering and as an Operations Engineer in petrochemicals, she has held roles in JM as a Process Engineer, Catalyst Account Manager, Key Account Manager, Commercial Licensing Manager and is now a Business Development Manager for our world leading CCS-enabled hydrogen production technology, **LCH™**.

Lucy moved from our upstream business in the UK to our Hydrogen business in Houston, TX in 2015 where she learned most of what she knows about syngas while on customer sites helping them to troubleshoot, increase efficiency and plan and execute catalyst changeouts.

She is the Vice Chair of the Global Syngas Technologies Council – an organization that brings together technology companies, EPCs and operators to network and exchange ideas as well as driving the direction of the syngas industry.
