

JM

JM-LEVO digital platform

Performance, simplicity, and expertise

Digital platforms providing insightful analytics based on Johnson Matthey (JM) expertise and advanced data modelling.

Improve your performance

- Receive targeted performance advice from our machine learning and proprietary analytical models
- Stay agile and make rapid, informed adjustments as conditions change
- Optimise production and hit your objectives, whether yield, catalyst life, cost or capacity

Achieve simpler production

- Simplified data capture process, reducing the effort required for manipulating and sharing data with JM
- Get immediate reports and insights from your data via the online dashboard
- Benchmark and compare across loads and reactors, as well as monitor performance across multiple sites and plants

Access JM expertise

- Troubleshoot problems and find solutions quickly with expert support
- Share data and collaborate with JM's technical experts
- Get 24/7 access to Johnson Matthey's comprehensive library of technical information

The JM-LEVO™ range includes our formaldehyde and methanol portals currently. For more information please contact JMLevo@matthey.com

Simplify your formaldehyde production

Managing your plant operations and formaldehyde production as conditions change can be a challenge.

The **JM-LEVO** Formaldehyde Portal provides you with the tools to efficiently monitor, adapt and optimise your processes in line with changing priorities and business requirements. This forms part of our commitment to make formaldehyde production simpler for producers and operators worldwide.

Centralised platform for your production and performance management

JM-LEVO Formaldehyde offers a fast, simple and secure method of sharing data with JM. The platform enables you to view key metrics related to your performance and offers valuable insights and recommendations supported by our technical experts. Optimisation tools facilitate appropriate on time decision making to adjust certain parameters when improving and optimising the yield of your plants.

Building upon our historic expertise and support with proprietary analytical models

Through our **FORMOX™** brand and market leading oxide technology, we have been providing support and insights to formaldehyde producers for over 60 years. **JM-LEVO** Formaldehyde Portal strengthens this support, combining our expertise with analytics and a machine learning model, helping you to deliver a higher performance across your reactors and plants. These models are tailored to accommodate all plant designs and can analyse large volumes of data to support optimisation.

Please contact us at JMLevo@matthey.com for more information or visit the formaldehyde pages on our website at [matthey.com](https://www.matthey.com)
